Message to the Manager

ZoomRide should invest more in Lagos, it generated the sum of N218,890 (38.5% of total revenue) which is the highest revenue by city. The data problems observed were the inconsistencies in spellings and duplicate trip records which could lead to splitting of revenue and count of the same city among multiple columns leading to wrong budget decisions. This can be prevented with proper data validation Also there were 9 completed trips with missing fares which could result in underestimation of total revenue and revenue across cities

I would also like to know more about the operating costs and profit in each city before making a big investment decision.
